

Gardening by the Moon

September 2023

Fall Color

By Dr. Robert Moon

If you want to create a color scheme for this Fall to get you into a festive mood, a combination of marigolds and crotons all have great fall colors. There are many varieties of marigolds and crotons to make your selection from.

French Marigold Bolero

French Marigold Colossus

French Marigold Fiesta

French Marigold Harmony

African Marigold Mandarin

French Marigold Lemon Drop

French Marigold Naughty Marietta

You can also embed crotons among the marigolds to create more interest.

Zanzibar Croton

Red Icton Croton

Mrs. Icton Croton

Mammy Croton

Gold Star Croton

Florida Select Croton

Magnificent Croton

You can plant these in beds and pots now. A few pumpkins and bales of hay can round out your fall look.

If you cannot find any of these varieties at your garden center, just pick from any of the marigold, croton varieties, or other fall colors they have in stock. These plants will die at the first freeze, so don't get too attached, but enjoy the beauty while it lasts.

BONUS PLANTING TIP: Want to add more evergreen winter and spring flowering shrubs to your yard? Then, check out Camellias! They come in a broad color palette, from white, pink, red, and yellow. Camellias prefer acid soils, so add plenty of acid compost to the soil in pots or beds and plant only a few as accent plants. They work great to add interest to your backyards.

SLIME FLUX

By Jacob Cheatham

Is your tree leaking sap? The extreme heat further stresses many trees that have previously suffered freeze damage. In many cases, especially with Elm Trees, this causes a bacterial disease called Slime Flux, which appears as a discoloration on the trunk due to leaking sap.

Slime Flux

To treat Slime Flux, spray your tree's trunk with Talstar (Bifenthrin) or Neem Oil. We also recommend applying the fungicide Garden Phos at the base of your tree. Hopefully, this will help your tree recover with treatment and the cooler temperatures ahead!

Fall Vegetable Garden

The following vegetables can be planted by the end of September:

- Beets*
 - Planting Depth: 1 inch
 - Row Distance: 12-24 inches
 - Crop Height: 1.5 feet

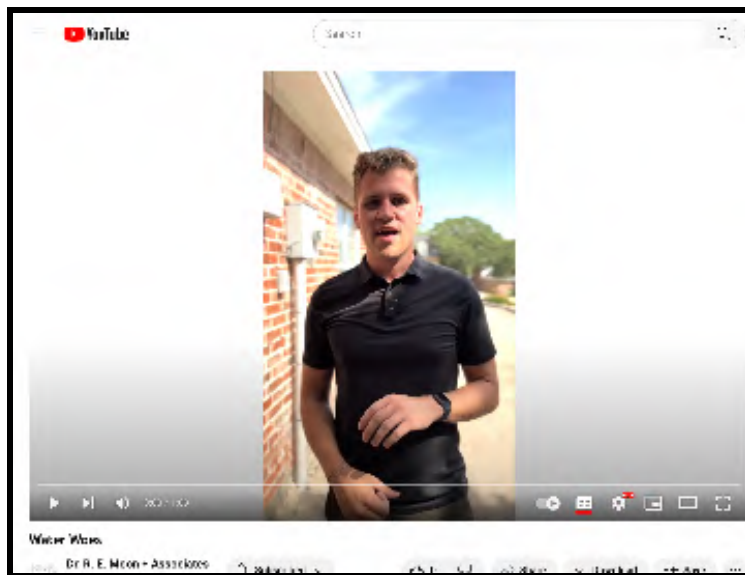

- Spring Date: Feb. 1- Feb. 15
- Fall Date: Sep. 1- Oct. 1
- Days to Maturity: 50-60
- Varieties: Pacemaker III
- Bush Beans
- Broccoli
- Cabbage*
 - Planting Depth: .5 inch
 - Row Distance: 24-36 inches
 - Crop Height: 1.5 feet
